ABSTRACT:

PROBLEM TO BE SOLVED: To promote the use of useful application software by calculating a varying charge according to the stored charge of ordered construction work and calculating the charge for the use of the application software according to the sum of the varying charge and the basic charge.

SOLUTION: A user operates an input means to input and transmits the identification name of the construction work using the application software, the charge of the construction work, and the desired use period of the application software. A server system 20, having received the information calculates the varying charge B=f(A) of the application use charge (f(A) is a function of A) according to the construction order received charge A. Furthermore, the server system 20 reads the basic charge C stored previously in a storage means and adds the basic charge C and varying charge B together, to obtain the charge for the use of the application software.
